

KU PROVIDES benefits to Kansas students & residents

- Education leads to personal success. Earnings double for workers with bachelor's degrees versus those with high school diplomas.
- Regents universities and colleges enroll 200,000 students each year. Nearly 30,000 of those students attend KU; seven in 10 KU students are Kansas residents.
- ➡ KU has Kansas' only medical and pharmacy schools and is a critical source for graduates in countless other fields.
- But KU has taken \$42.9 million in cuts and unfunded mandates, limiting student opportunities.
- Faculty cuts mean KU can only educate as many undergraduate nurses as in the mid-1990s, and fields like engineering face similar challenges.

KU CREATES jobs & prosperity

- Kansas businesses rely on the more than 150,000 KU alumni who live and work in Kansas.
- Even during the recession, shortages in fields like nursing and engineering hamper the economy.
- ► KU research brought more than \$238 million to Kansas in fiscal 2010, creating jobs and spurring growth.
- Sixteen start-up companies are active in Kansas thanks to KU research.
- Other universities have hired a dozen KU professors away from KU in the last two years, affecting academics and research funding.
- ➡ KU maximizes grants and donations. And efficiencies and cost avoidance have saved \$14.6 million since 2008, but these can't offset state budget cuts.

KU ENSURES *Kansas will be ready*

for the recovery

- Regents universities and colleges award more than 35,000 degrees each year.
- But it takes time to earn a degree, so the workers that businesses will need in four years must be in college now.
- Budget cuts are constricting enrollment now, limiting the number of educated workers available in the near future.
- Cutting faculty members reduces the research dollars brought to Kansas and the discoveries made here, limiting opportunities for growth of new industries.
