Engineering Physics II with Lab – PHY 2030/PHY 2031/PHY 2032 CORE OUTCOMES

Course Approval Date: Summer 2016

Course Review Date: Summer 2021

Engineering Physics II (and associated laboratory experience) is the continuation of Engineering Physics I (PHY 1030/PHY 1031/ PHY 1032) using the tools of algebra, trigonometry, and calculus.

Topics covered in this course will include electricity and magnetism, electromagnetic waves, and optics.

At the conclusion of this course, students will be able to:

1. Evaluate situations involving Engineering Physics II topics by choosing the appropriate conceptual frameworks.
2. Recall relevant physical models and to successfully apply these models using techniques of symbolic and numerical analysis in order to generate solutions to problems in Engineering Physics II topics.
3. Think critically by utilizing problem solving techniques to evaluate and analyze context rich, multi-step problems in Engineering Physics II topics, selecting relevant information, selecting an approach to solving the problem and carry out the analysis needed to generate and communicate solution(s).
4. Perform measurements using physical apparatus, analyze the collected data including appropriate treatment of errors and uncertainties, generate and communicate conclusions based on the data and analysis for experimental investigations in Engineering Physics II topics.
