## BACKGROUND

---

The Kansas Core Outcomes Project was initiated in 1999 by the Kansas Council of Instructional Administrators (KCIA), a group comprised of the chief academic officers of the state's community colleges and vocational-technical schools/colleges. The goal of this project was to develop core outcomes and competencies for general education courses at the state's colleges and universities.

The first meeting for the project was held in fall 1999 at the Southside Educational Center in Wichita. Faculty were invited to that meeting from the state's 19 public community colleges, six Regents' universities, and Washburn University. Six disciplines were represented: Biology, Computer Science, English, Mathematics, Sociology, and Speech. A second meeting, in spring 2000, was conducted at Emporia State University, and three additional disciplines—Chemistry, History, and Psychology—were added to that initial group of six. A third meeting, again at Southside, was conducted in January 2001. Another meeting of the core competency groups was held in September of 2002. Subsequently, disciplines such as English, Mathematics, and Speech have scheduled other, independent meetings.

The Core Competency meetings were originally financed through the KCIA budget. Each institution made a commitment to its faculty and supplied them with finances for lunch and travel. Due to increased budget decreases and the time commitment for our faculty, it was decided that future meetings would be held annually in the fall semester. In 2005 and 2006, additional Core Competency meetings occurred, and reports have been filed with the Kansas Board of Regents.

At its retreat in the summer of 2007, the KCIA members decided that the project needed a comprehensive list of courses that have been evaluated in each area, a standard format for reporting of the reviews and outcomes, as well as minutes. Therefore, this report follows a standard format for each discipline even though some information, such as course titles, may be missing. The annual reports are posted to the Kansas Board of Regents' website. Each report contains the most recent review of the outcomes for the courses listed at each academic institution.

In 2010, the location for the Core Outcomes meeting moved from Wichita State University to the University of Kansas. 149 individuals from 28 institutions participated in the September 24, 2010 meeting on KU's Lawrence campus. Joan Warren from the Kansas Board of Regents opened the meeting with a conversation about the six strategic goals of Foresight 2020. Faculty spent the remainder of the morning meeting within their individual groups. KU will host the Core Outcomes meeting again in 2011. Kansas State University is scheduled to host the Core Outcomes meeting in 2012 and 2013.

# Core Outcomes

Institutional abbreviations in the following section:

CC = Community College

TC = Technical College

TS = Technical School

U = University

**Discipline:** Anthropology

**General Course Title:** Introduction to Archaeology (Methods-Based Approach)

**Date Developed (and any modification):** September 2008; modified October 2009

**Facilitator:** William McFarlane, Johnson County

**Courses from Each Participating College/University for which Core Outcomes Apply:**

Course Title	Course Number	Credit Hours	Institution
			Allen County CC
			Barton County CC
<b>Intro to Anthropology</b>	<b>BS106</b>	<b>3</b>	Butler CC
			Cloud County CC
			Coffeyville CC
			Colby CC
			Cowley County CC
			Dodge City CC
<b>Intro to Archeology</b>	<b>AN302</b>	<b>3</b>	Emporia State U
			Fort Hays State U
			Fort Scott CC
			Garden City CC
			Highland CC
			Hutchinson CC
			Independence CC
			Johnson County CC
			Kansas City Kansas CC
			Labette CC
			Neosho County CC
			Pittsburg State U
			Pratt CC
			Seward County CC
			U Kansas
			Washburn U
<b>Introduction to Archaeology</b>	<b>Anth 103</b>	<b>3</b>	Wichita State U

## Comments:

In 2007 the group discussed several ways that introductory archaeology courses are taught, including the following: (1) Methods-based approach, (2) World Prehistory approach, (3) Evolution/ Prehistory approach, and (4) combination World Prehistory and Methods approach. Archaeology is taught in each of these ways at institutions of higher learning in Kansas. Thus, we decided to develop outcomes for all four approaches.

## Core Outcomes (listed in total including updates):

Upon completion of an introductory course with an emphasis on archaeological methods students show and understanding of:

### History and development of the field of archaeology

- Discuss (trace) the historical origins of the discipline through contemporary approaches to understanding the past.
- Outline the key concepts, goals, methods of the major theoretical approaches in Archaeology
- Compare and contrast Archaeology with other social sciences and natural sciences
- Discuss the relationship among private, academic, governmental, and other archaeologies

### Chronology building

- Distinguish between absolute and relative dating
- Describe a variety of chronometric dating techniques
- Explain the concepts and applications of stratigraphy and seriation in archaeological practice

### Archaeological methods (finding, documenting, and investigating the archaeological record)

- Explain the systematic nature of archaeological research
- Describe the significance of sampling in archaeology
- Outline the goals and methods in archaeological surveys
- Explain the significance of common noninvasive techniques in archaeology
- Identify basic recovery techniques

### Specialties within Archaeology

- Define and outline the goals and methods in common archaeological specialties, such as:
  - Paleoethnobotany
  - Geoarchaeology
  - Faunal analysis
  - Lithic analysis

### Major themes of archaeological research

- Describe the methods that archaeologists employ to reconstruct subsistence strategies
- Outline the archaeological correlates for trade and exchange
- Explain how archaeologists identify social inequality in the archaeological record

- Discuss the possibilities and limitations of understanding past technology
- Describe how archaeologists analyze ideological systems in the past

#### Goals of archaeological research

- Explain the importance of constructing a chronology of the human past
- Discuss the relevance of past lifeways
- Explain the significance for understanding culture change

#### Ethics and Archaeology

- Demonstrate knowledge of state, federal, or international laws that impact archaeological research and cultural patrimony
- Discuss the ethical and responsible treatment of human remains and traditional cultural properties, such as:
  - Sacred places
  - Sacred materials
- Discuss the importance of archaeological stewardship

#### **Comments:**

#### **Participants:**

Work was done by e-mail.

**Discipline:** Anthropology— with emphasis on prehistory

**General Course Title:** Introduction to Anthropology/Archaeology (Prehistory emphasis)

**Date Developed (and any modification):** October 2, 2009

**Courses from Each Participating College/University for which Core Outcomes Apply:**

Course Title	Course Number	Credit Hours	Institution
			Allen County CC
			Barton County CC
			Butler CC
			Cloud County CC
			Coffeyville CC
			Colby CC
			Cowley County CC
			Dodge City CC
		3	Emporia State U
			Fort Hays State U
			Fort Scott CC
			Garden City CC
			Highland CC
			Hutchinson CC
			Independence CC
			Johnson County CC
			Kansas City Kansas CC
			Labette CC
			Neosho County CC
			Pittsburg State U
			Pratt CC
			Seward County CC
			U Kansas
			Washburn U
		3	Wichita State U

**Comments:**

In 2007 the group discussed several ways that introductory archaeology courses are taught, including the following: (1) Methods-based approach, (2) World Prehistory approach, (3) Evolution/ Prehistory approach, and (4) combination World Prehistory and Methods approach. Archaeology is taught in each of these ways at institutions of higher learning in Kansas. Thus, we decided to develop outcomes for all four approaches.

**Core Outcomes:**

Upon completion of an introductory course with an emphasis on world prehistory students show and understanding of:

Describe the historical origins of Archaeology as a discipline and outline common techniques for understanding the prehistoric past through material remains

- Discuss (trace) the historical origins of the discipline through contemporary approaches to understanding the past.
- Outline the key concepts, goals, methods of the major theoretical approaches in Archaeology
- Compare and contrast Archaeology with other social sciences and natural sciences

Compare current theories on the origins of modern humans and their ancestors by considering the archaeological, physical, and genetic lines of evidence

- Compare and contrast the physical and behavioral characteristics of hominin species
- Explain hominin development from an evolutionary perspective
- Discuss the evidence for hominin migrations out of Africa
- Evaluate models for the origins of modern humans using genetic, anatomical, and archaeological evidence

Explain the variety of human adaptation to the climatic and ecological conditions of the early Holocene

- Describe the timing and characteristics of environmental periods, such as
  - Pleistocene
  - Last glacial Maximum
  - Late Glacial Interstadial
  - Younger Dryas
  - Holocene
- Explain the processes that lead to domesticated plants and animals
- Discuss the consequences of domestication on society and the environment
- Discuss theories for the origins of sedentism, agriculture, social complexity, and state formation

Compare theories on the rise and spread of food production by considering archaeological evidence from around the world

- Identify the geographic, climatic, and environmental features, as well as their effect on local social development in:
  - Africa
  - Southwest Asia
  - East Asia
  - Australia and the Pacific
  - Europe
  - Americas
- Characterize the Neolithic transitions in key regions (listed above) around the world

Compare theories on the rise of complex cultures by considering archaeological evidence from around the world

- Review various theories and debates on the origins of state level societies
- Define key terms and concepts crucial to an understanding of state development
- For each pristine state:
  - Identify the environment, climate, and topography, as well as their impact on development of middle-range and complex societies
  - Describe the cultural periods
  - Explain the transition from simple to complex societies
  - Be conversant with key sites, finds, and concepts

Demonstrate the relevance of archaeological interpretation on contemporary local and global conditions

- Examine the ways in which knowledge of the past can give insight into current problems.
- Describe the long and short-term consequences of human responses to social, ecological, and climate change
- Characterize the ways in which archaeology can contribute to an understanding of the past and present.

**Comments:**

**Participants:**

**Discipline:** Anthropology

**General Course Title:** Physical Anthropology

**Date developed:** September 2010

**Courses from Each Participating College/University for which Core Outcomes Apply:**

Course Title	Course Number	Credit Hours	Institution
Physical Anthropology	ANTH 126	3	Johnson County CC
Introduction to Physical Anthropology	ANTH 102	3	Kansas City, Kansas CC
Fundamentals of Physical Anthropology	ANTH 104/304	4	University of Kansas
Physical Anthropology	AN 116	3	Washburn University
Introduction to Physical Anthropology	ANTH 280/281	3	Kansas State University
Biological Anthropology	ANTHR 101	3	Wichita State University

The next focus for the Core Outcomes Project will be Courses in Linguistic Anthropology. Tiffany Kershner (Kansas State University) and Arienne Dwyer (University of Kansas) will be the central participants in the discussion.

For corrections, additions, or revisions to the minutes please contact Bill McFarlane at [mcfarlane@jccc.edu](mailto:mcfarlane@jccc.edu) or (913) 469-8500 x4640.

Upon completion of an introductory course in physical or biological anthropology students should be able to demonstrate an understanding of the following:

Demonstrate knowledge of Evolutionary Theory

- The historical development of evolutionary theory through contemporary approaches
- The basic forces and concepts underlying the modern evolutionary synthesis, for example: Molecular Genetics, Inheritance, and Microevolution

Characterize the Primates

- Primate characteristics
- Primate taxonomy and classification
- Behavioral ecology (reproductive strategies, life histories, diet, sociality, cooperation and conflict)

Trace Primate and Human Evolution

- Methodology and Interpretive Frameworks in Paleoanthropology
- Fossil primate and human taxonomy and classification
- Biocultural approaches to human evolution (bipedalism, tool-use, brain growth, language, intelligence)

Describe Human Variation and Adaptation

- Modern polygenetic variation and global patterns of adaptation
- Concept of race
- Patterns of modern human adaptation (thermal environmental stress, high altitude stress, nutritional deficiency, disease)
- Culture as adaptation

**Discipline:** Biology

**General Course Title:** Introductory Biology

**Date Developed (and any modification):** 2000; modified September 17, 2004

**Courses from Each Participating College/University for which Core Outcomes Apply:**

Course Title	Course Number	Credit Hours	Institution

Intro to Biology with lab	BI 100/101	3+1	Washburn U
Human Organism with lab	BIOL 106/107	3+1	Wichita State U

**Comments:**

The biology committee's philosophy relative to the General Education Introductory Biology course with laboratory is based on the assumption that this is the only course in life sciences that the majority of these students will ever take. As such, we believe that it needs to cover the most basic elements of biology, be rigorous, and expose students to the diversity of issues that are relevant to them now and in the future. Understanding the basic concepts of biology is critical to developing the knowledge base and the analytical tools to understand how the world works and how to be a critical consumer of the information received on a daily basis.

Our committee realizes that any individual Introductory Biology course might place a greater emphasis on certain biological areas, such as health or environmental issues. Due to these differences, we conclude that specific competencies should be written with the individual course in mind. In order to most efficiently utilize the expertise and experience of the individual instructors and institutions, we have chosen seven core outcomes that we believe represent the essence of a General Education Biology course. These seven outcomes provide a uniform base for instruction of basic biological concepts with suggested topics to allow flexibility in optimizing the resources of individual institutions.

**Core Outcomes:**

Upon completion of the Introductory Biology course, students will be able to do the following:

Understand the Nature of Science

- Scientific processes
- Scientific methods

Understand the Levels of Organization and Emergent Properties of Life

- Chemical
- Cellular
- Organ/organ system
- Organismal
- Ecological

Understand Bioenergetics

- Enzyme activity
- Metabolism
- Cellular respiration/photosynthesis

Understand the Importance of Reproduction in Maintaining the Continuity of Life

- Mitosis
- Meiosis
- Differentiation/development
- Diversity of reproductive strategies

Apply Principles of Genetics to Unity and Diversity of Life

- Classical genetics
- Molecular genetics

Discuss Evolution as the Mechanism of Change in Biology

- Natural selection
- Speciation
- Diversity of life/classification

Understand Principles of Ecology

- Ecosystem organization
- Ecological interactions
- Environmental issues

Nine suggested life skills for biology students include the following:

- Communication skills
- Cooperative learning
- Problem solving/critical thinking
- Research skills
- Ethics
- Awareness of world/interdisciplinary understanding
- Personal enrichment
- Biology enrichment
- Actionism/citizenship/responsibility

Twelve laboratory topics/skills for biology students include the following:

- Microscopy skills
- Quantitative measurement skills incorporating the metric system
- Analytical and statistical skills including presenting and/or interpreting graphs, tables, etc.
- Experience with living organisms
- Identification and proper use of laboratory equipment including the most current technology available
- Field experience
- Basic biochemistry
- Organismal and cellular structure and function
- Classification/taxonomy
- Evolution/natural selection
- Genetics
- Reproduction (cellular and organismal)

### **Committee Recommendations:**

The following is a specific list of recommendations that the committee is making for all General Education Biology courses (discussed at the May 1, 2000, meeting and not reviewed at the September 2004 meeting):

1. General Education biology courses should not be offered in conjunction with Biology majors' courses to more specifically meet the needs of both the majors and non-majors in Biology.
2. Each General Education Biology lecture course must teach and assess to the seven minimum core competencies.
3. A statewide assessment of the General Education Biology courses should not be mandated.
4. Each course would have a lecture and a laboratory component with a minimum of four credit hours.
5. The laboratory component should be considered to be an integral part of the course and linked to the lecture material whenever possible.
6. The laboratory component must include the lab topics and skills that are listed above. A single laboratory could incorporate several topics/skills.

It is expected that the nine suggested life skills be incorporated into a General Education Biology course, but the assessment of these skills should not be mandated.

### **Resolutions:**

The Kansas Biology Core Competency Committee passed the following two resolutions at the May 1, 2000, meeting:

#### Resolution 1

All General Education courses should demand the highest level of academic rigor.

#### Resolution 2

The Kansas Biology Core Competency Committee opposes the concept of concurrent enrollment and believes that college courses should be taught in a college setting for the following reasons:

1. The new science standards for Kansas high schools are not in compliance with our basic core competencies.
2. High school instructor qualifications do not include preparation to teach at the college level.
3. Physical lab facilities may be lacking.
4. The community in which high school instructors interact does not provide a base for maintaining academic standards at the college level.
5. High school students have rarely reached a maturity to capitalize on a college level biology class.
6. There is very real physical lack of quality control at high school sites.

The Kansas Biology Core Competency Committee agreed upon the following regarding concurrent enrollment and instructor credentials at the September 17, 2004, meeting:

1. Adjunct instructors should have the same credentials as full-time instructors—an M.A. with 18 hours in the discipline—and their appointment should be based on the recommendation of the head instructor in the discipline.

2. The course site and lab facility should be inspected to make sure they are appropriate for the course.
3. The adjunct instructor should be involved in faculty mentoring.
4. Concurrent enrollment students should be preassessed to ensure college preparedness of students.
5. Institutions should adhere to the guidelines proposed by the legislature regarding concurrent enrollment (see attachment from Kansas Board of Regents *Policy and Procedures*).

**Participating Members:**

Brent Bates, **2000 Facilitator**

Ellie Skokan, **2004 Facilitator**

Wichita State U (facilitator in 2004)

Sondra Dubowsky	Allen County CC
John Simmons	Barton County CC
Tonya Kerschner	Butler CC
Bill Langley	Butler CC
Richard Clarke	Cloud County CC
Scott Thompson	Cloud County CC
Leslie Berryhill	Cowley County CC
Michelle Schoon	Cowley County CC
Larry Corpus	Dodge City CC
John Richard Schrock	Emporia State U
Elmer Finck	Fort Hays State U
Ken Hudiburg	Fort Scott CC
Arthur Nonhof	Garden City CC
John Schafer	Garden City CC
Ken Larkins	Highland CC
Laura Gossage	Hutchinson CC
David Loring	Johnson County CC
Ernie May	Kansas City Kansas CC
Bharathi Sudarsanam	Labette CC
Steve Yuza	Neosho CC
James Triplett	Pittsburg State U
Dave Chambers	Pratt CC
Michael Westerhaus	Pratt CC
Todd Carter	Seward County CC
Chris Haufler	U Kansas
Lee Boyd	Washburn U

**Discipline:** Biology

**General Course Title:** General Biology I and II (Majors Sequence)

**Date Developed (and any modification):** Fall 2003; modified Fall 2005; modified Fall 2009

**Courses from Each Participating College/University for which Core Outcomes Apply:**

**Course titles from each contributing College/ University for which the Core outcomes apply:**

Course	Course No.	Credit Hrs.	Institution

Bio 1/ Bio 2	150/ 152	4/4	University of Kansas
Bio/ Bot/ Zoo	102/ 105/ 110	5/4/4	Washburn University
Gen Bio I / II	210/ 211	5/ 5	Wichita State University

**Comments:**

Washburn University, Emporia State University, and Fort Hays State University still prefer the three-semester sequence with Biology, Botany, and Zoology and may not accept direct transfer of Biology I and Biology II as equivalent.

**Core Outcomes:**

Upon completion of the two- or three-semester sequence of lecture/lab courses for biology majors, students will be able to describe, identify, and demonstrate an understanding of the following:

- Nature of science
- Atoms and molecules as the building blocks of life
- Structure and function of cells and cellular transport mechanisms
- Structure and function of organs and organ systems
- Energy and its use in various living organisms
- Cellular respiration
- Photosynthesis
- Cell cycle and the continuity of life
- Patterns of inheritance
- Meiosis, chromosomes, and the mechanism of heredity
- Molecular genetics, gene technology and bioethics
- Organismal growth and development
- Population genetics and evolution
- Speciation
- Phylogeny of organisms and the systems of classification
- Prokaryotes and viruses
- Kingdom Fungi
- Kingdom Protista
- Kingdom Plantae
- Kingdom Animalia
- Population dynamics and community ecology
- Ecosystems and biomes

**Comments:**

Response from the four-year institutions: Students will be examined on an individual basis regarding how to handle those that have two semesters instead of three semesters, where required. Four-year institutions will determine what additional classes will be needed.

Microbiology	BI 2705		<i>Microbiology: A Human Perspective</i> , Nester	Seward County CC
Basic Microbiology	BIOL 200		<i>Foundations in Microbiology</i> , 5 <sup>th</sup> edition, Talaro	U Kansas
Introduction to Microbiology	BI 204 BI 205 (lab)		<i>Microbiology: Principles and Explorations</i> , Jacquelyn Black	Washburn U
Introduction to Microbiology	BIOL 220		<i>Microbiology: A Human Perspective</i> , Nester	Wichita State U

**Comments:**

Recommended Prerequisites: As a body, the core participants feel responsible for the quality of the content of this course. It is highly recommended that students entering this course have a strong foundation in the principles of biology and chemistry in order to facilitate learning of microbiology concepts and to help align the courses for a two-year Allied Health program with that of a four-year Allied Health program. It is for this reason that the group suggests a minimum prerequisite course in biology and would additionally like to see the students have a chemistry foundation as well.

**Core Outcomes:**

Upon completion of this course, students will demonstrate an understanding of the following:

Content Knowledge

- Microbial cell biology (25%)
  - Structure and function of prokaryotic and eucaryotic organisms
  - Structure and function of acellular infectious agents
  - Growth and division
  - Energy metabolism
  - Regulation of cellular activities
- Microbial genetics (20%)
  - Inheritance and flow of information
  - Causes, consequences, and significance of mutations
  - Exchange and acquisition of genetic information
  - Genetic engineering
  - Biotechnology
- Interactions of microorganisms and humans (50%)
  - Host defense mechanisms and immune systems
  - Pathogenicity mechanisms of cellular and acellular infectious agents
  - Disease transmission
  - Control of microorganisms
  - Antimicrobial agents
  - Epidemiology and public health
  - Adaptation and natural selection
  - Symbiosis
- Interactions and impact of microorganisms in the environment (5%)
  - Microbial recycling of resources
  - Microbes transforming the environment

## Laboratory Skills

- Discipline specific
  - Practicing laboratory safety
  - Collecting and handling specimens
  - Isolating and identifying microorganism (differentiation)
  - Using a microscope
  - Pipetting and micropipetting
  - Using aseptic technique
  - Growing and controlling microorganisms
  - Utilizing basic antigen-antibody interactions
  - Making dilutions
- General
  - Effectively communicating scientific information
  - Finding and using appropriate resources
  - Critically evaluating information, results, and incompatibilities
  - Demonstrating ethical behavior and scientific integrity

## **Comments:**

Recommendation: Allied health programs should include in their requirements a course in microbiology. According to ASM recommendations, topics that are felt to be essential or very important are listed, with estimates given for the percent of time devoted to each area. The principles of evolution, genetics, diversity, and ecology are integral to all disciplines of biology and must be included in the teaching of microbiology. In addition, this class should be taught with a laboratory component incorporating the skills listed.

**Comments:**

Recommended Prerequisites: (1) college chemistry (introductory/general) and (2) college biology (introductory/general)

**Core Outcomes:**

The Anatomy and Physiology modules may be covered in a different sequence from that which is listed here. Content topics need not be taught in single blocks but may be integrated. Unifying themes, such as homeostasis, are emphasized throughout.

Body Plan and Organization

Students who have completed this section of the course should understand the scope of studies in anatomy and physiology and be able to use and understand descriptive anatomical and directional terminology. Topics include the following:

- Anatomical position
- Body planes, sections
- Body cavities and regions
- Directional terms
- Basic terminology
- Levels of organization
- Survey of body systems

## Homeostasis

Students who have completed this section of the course should be able to explain the basic concept of homeostasis and how homeostatic mechanisms apply to body systems. Topics include the following:

- Negative feedback
- Positive feedback
- Homeostatic mechanisms
- Control systems

## Chemistry and Cell Biology Review

Students who have completed this section of the course should be able to identify cellular structures and explain their respective functions. Topics include the following:

- Atoms and molecules
- Chemical bonding
- Inorganic compounds/solutions (including the concept of pH)
- Organic compounds
- Energy transfer using ATP
- Intracellular organization of nucleus and cytoplasm
- Membrane structure and function
- Mechanisms for movement of materials across cellular membranes
- Organelles
- Protein synthesis
- Cellular respiration (introduction)
- Somatic cell division (mitosis and cytokinesis)

Note: The intent of the prerequisites given earlier is to minimize the amount of time spent on the above section.

## Histology

Students who have completed this section of the course should be able to describe the basic tissues of the body and their location and explain their functions. Topics include the following:

- Microscopic anatomy, location, and functional roles of the basic tissue types, including epithelial, connective, muscular, and nerve
- Membranes (mucous, serous, and synovial)

## Integumentary System

Students who have completed this section of the course should be able to identify and describe the major gross and microscopic anatomical components of the integumentary system and describe the functions of the system. Topics include the following:

- General functions of the skin
- Gross and microscopic anatomy of the skin and accessory structures
- Roles of the specific tissue layers of the skin
- Roles of the accessory structures

## Skeletal System

Students who have completed this section of the course should be able to identify and describe the major gross and microscopic anatomical components of the skeletal system and explain their functional roles in osteogenesis, repair, and body movement. Topics include the following:

- General functions of bone and the skeletal system
- Histology and structure of a typical bone
- Physiology of bone formation, growth, remodeling, and repair
- Names and markings of bones
- Organization of the skeleton
- Structure and function of joints
- Classification of joints

## Muscular System

Students who have completed this section of the course should be able to identify and describe the major gross and microscopic anatomical components of the muscular system and explain their functional roles in body movement, maintenance of posture, and heat production. Topics include the following:

- General functions of muscle tissue
- Identification, general location, and comparative characteristics of skeletal, smooth, and cardiac muscle tissue
- Detailed gross and microscopic anatomy of skeletal muscle
- Physiology of skeletal muscle contraction
- Skeletal muscle metabolism
- Principles and types of whole muscle contraction
- Nomenclature of skeletal muscles
- Group actions of skeletal muscles (prime movers, synergists, etc.)
- Location and function of the major skeletal muscles

## Nervous System

Students who have completed this section of the course should be able to identify and describe the major gross and microscopic anatomical components of the nervous system and explain their functional roles in communication, control, and integration. Topics include the following:

- General functions of the nervous system
- Organization of the nervous system from both anatomical and functional perspectives
- Gross and microscopic anatomy of the nerve tissue
- Neurophysiology, including mechanism of resting membrane potential, production of action potentials, and impulse transmission
- Neurotransmitters and their roles in synaptic transmission
- Sensory receptors and their roles
- Division, origin, and function of component parts of the brain
- Protective roles of the cranial bones, meninges, and cerebrospinal fluid
- Structure and function of cranial nerves
- Anatomy of the spinal cord and spinal nerves
- Reflexes and their roles in nervous system function

- Physiology of sensory and motor pathways in the brain and spinal cord
- Functions of the autonomic nervous system
- Comparison of somatic and autonomic nervous systems

### Special Senses

Students who have completed this section of the course should be able to identify and describe the major gross and microscopic anatomical components of the eye and ear, and explain their functional roles in vision, hearing, and equilibrium. Students should also be able to identify and locate the receptors responsible for olfaction and gustation, and briefly describe the physiology of smell and taste.

Topics include the following:

- Gross and microscopic anatomy of the eye and ear
- Roles of specific tissues of the eye in vision
- Roles of specific tissues of the ear in hearing and equilibrium
- Olfactory receptors and their role in smell
- Gustatory receptors and their role in taste

### Endocrine System

Students who have completed this section of the course should be able to identify and describe the major gross and microscopic anatomical components of the endocrine system and explain the functional roles of their respective hormones in communication, control, and integration. Topics include the following:

- General functions of the endocrine system
- Definition and chemical classification of hormones
- Control of hormone secretion
- Mechanisms of hormone action at effectors
- Roles of the hypothalamus and pituitary gland
- Identity, secretory control, and functional roles of the major hormones of the pituitary, adrenal, thyroid, parathyroid, pancreas, gonads, and pineal glands, including the effects of hypo- and hypersecretion
- Functions of hormones secreted by other endocrine tissues and cells, such as erythropoietin, thymosin, digestive hormones, placental hormones, atrial natriuretic peptide, vitamin D, eicosanoids, and growth factors
- Hormonal response to stress

Note: Since the endocrine system plays a key role in the regulation and integration of body organ systems, detailed aspects of endocrine system function may be emphasized throughout the course.

### Cardiovascular System

Students who have completed this section of the course should be able to identify and describe the major gross and microscopic anatomical components of the cardiovascular system and explain their functional roles in transport and hemodynamics. Topics include the following:

- General functions of the cardiovascular system
- Formation and composition of blood plasma
- Identity, microscopic anatomy, numbers, formation, and functional roles of the formed elements of the blood

- Hemostasis, including coagulation of the blood
- ABO and Rh blood grouping
- Gross and microscopic anatomy of the heart, including the conduction system
- Physiology of cardiac muscle contraction
- Pattern of blood flow between heart chambers and between the heart and major vessels leading directly to or from the heart
- Cardiac cycle, including basic rhythm of heartbeat, pressure and volume changes, heart sounds, and electrocardiogram
- Regulation of stroke volume and heart rate
- Anatomy and functional roles of the different types of blood vessels
- Pattern of blood circulation throughout the body, including systemic, pulmonary, coronary, hepatic portal, and fetal circulations
- Blood pressure and its functional interrelationships with cardiac output, peripheral resistance, and hemodynamics

### Lymphatic System and Immunity

Students who have completed this section of the course should be able to identify and describe the major gross and microscopic anatomical components of the lymphatic system and explain their functional roles in fluid dynamics and immunity. Topics include the following:

- General functions of the lymphatic system
- Gross and microscopic anatomy of the lymphatic system, including the pattern of lymph circulation
- Lymph formation and flow mechanisms
- Non-specific resistance to disease and the inflammatory response
- Antibody-mediated (humoral) immune response
- Cell-mediated immune response
- Roles of B cells and T cells in immune response

### Respiratory System

Students who have completed this section of the course should be able to identify and describe the major gross and microscopic anatomical components of the respiratory system and explain their functional roles in breathing/ventilation and in the processes of external and internal respiration. Topics include the following:

- General functions of the respiratory system
- Gross and microscopic anatomy of the respiratory tract and related organs
- Mechanisms of pulmonary ventilation
- Pulmonary air volumes and capacities
- Mechanisms of gas exchange in lungs and tissues
- Mechanisms of gas transport in the blood
- Control of pulmonary ventilation

## Digestive System

Students who have completed this section of the course should be able to identify and describe the major gross and microscopic anatomical components of the digestive system and explain their functional roles in digestion, absorption, excretion and elimination. Topics include the following:

- General functions of the digestive system
- Gross and microscopic anatomy of the GI tract and the accessory organs of digestion
- Mechanical and chemical processes of digestion and absorption
- Processes of excretion and elimination
- Hormonal and neural regulation of digestive processes
- Homeostatic integration with other systems

## Metabolism

Students who have completed this section of the course should be able to explain the functional relationship among cellular, tissue and organ level metabolism, the role nutrition plays in metabolism, and the mechanisms by which metabolic rate is regulated in the body. Topics include the following:

- Cellular respiration
- Catabolism and anabolism of carbohydrates, lipids, and proteins
- Nutrition and metabolism
- Metabolic roles of specific tissues and organs, including the liver, adipose tissue, and skeletal muscle
- Hormonal and neural regulation of metabolism
- Energy balance, metabolic rate, and thermoregulation

## Urinary System

Students who have completed this section of the course should be able to identify and describe the major gross and microscopic anatomical components of the urinary system and explain their functional roles. Topics include the following:

- General functions of the urinary system
- Gross and microscopic anatomy of the urinary tract, including detailed histology of the nephron
- Functional processes of urine formation, including filtration, reabsorption, secretion, and excretion
- Factors regulating and altering urine volume and composition, including the renin-angiotensin system and the roles of aldosterone and antidiuretic hormone
- Endocrine activities of the kidneys, such as vitamin D activation and secretion of erythropoietin
- Innervation and control of the urinary bladder

## Fluid/Electrolyte and Acid/Base Balance

Students who have completed this section of the course should be able to identify and describe the physiology of the homeostatic mechanisms that control fluid/electrolyte and acid/base balance. Topics include the following:

- Regulation of water intake and output
- Description of the major fluid compartments, including intracellular, extracellular, intravascular, and interstitial
- Volume and chemical composition of major compartment fluids

- Movements between the major fluid compartments, causal forces, volumes, and electrolyte balance
- Buffer systems and their roles in acid/base balance
- Role of the respiratory system in acid/base balance
- Role of the urinary system in acid/base balance

### Reproductive Systems

Students who have completed this section of the course should be able to identify and describe the major gross and microscopic anatomical components of the reproductive system and explain their functional roles in reproduction and inheritance. Topics include the following:

- General functions of the reproductive systems
- Gross and microscopic anatomy of the male and female reproductive tracts and external genitalia
- Reproductive cell division (meiosis, gametogenesis, folliculogenesis)
- Specific roles of the ovaries, uterine tubes, uterus, and vagina
- Specific roles of the testes, epididymis, ductus deferens, seminal vesicle, prostate, bulbourethral glands, and urethra
- Regulation of reproductive functions, including puberty, the female reproductive cycle, spermatogenesis, and the climacteric
- Development of the embryo/fetus and the hormonal changes during pregnancy
- Parturition and labor
- Mammary gland anatomy and physiology
- Sex determination and introductory human genetics

### **Comments:**

It should be noted that the topics for this course may be covered in a different sequence from that listed here. In addition, topics may be covered in subsequent courses, as long as all topics are discussed. There may be some transferability questions if all course sequences are not taken at the same institution. If course requirements are met at the same institution, then expectations of successfully meeting the defined competencies are satisfied.

**Comments:**

**Core Outcomes:**

In the areas listed, students should be able to do the following:

Hardware

- Understand specifications and configuration of computer hardware.

Operating Systems and Systems Software

- Understand and identify the major roles of operating systems and systems software.

Internet

- Understand the impact and use of the Internet.

Word-Processing

- Use word-processing software to create, edit and produce professional looking documents.

Spreadsheets

- Create spreadsheets and charts to analyze, investigate and/or interpret numerical financial data to support that problem-solving process.

Database

- Design, create, and maintain a database, which produces easy access to information in multiple dimensions.

Presentation

- Use presentation software to create, edit, and produce professional looking presentations.

### Integration

- Understand integration, application software.

### Ethical Issues and Concepts

- Understand ethical and social standards of conduct regarding the use of technology.

### Cybersecurity

- Identify and understand security threats and solutions.

### **Comments:**

There continue to be more questions than discussion regarding information technology literacy as a general education course.

### **Participants:**

## Comments:

The committee reapproved the Core Outcomes as revised in 2006 and re-emphasized the following statement taken from the full outcomes statement:

“Learning to write is a complex process, both individual and social, that takes place over time with continued practice and informed guidance. These composition outcome statements describe what we expect to find at the end of the required Composition sequence.”

## Core Outcomes:

The following statements describe only what we expect to find at the end of the required composition sequence:

### Rhetorical Knowledge

By the end of the required composition sequence, students should be able to do the following:

- Focus on a purpose.
- Respond to the needs of different audiences.
- Respond appropriately to different kinds of rhetorical situations.
- Use conventions of format and structure appropriate to the rhetorical situation.
- Adopt appropriate voice, tone, and level of formality.
- Understand how rhetorical situations shape reading and writing.
- 

### Critical Thinking, Reading, and Writing

By the end of the required composition sequence, students should be able to do the following:

- Use writing and reading for inquiry, learning, thinking, and communicating.
- Understand a writing assignment as a series of tasks, including finding, evaluating, analyzing, and synthesizing appropriate primary and secondary sources.
- Integrate their own ideas with those of others.
- Understand the relationships among language, knowledge, and power.

### Processes

By the end of the required composition sequence, students should be able to do the following:

- Be aware that it usually takes multiple drafts to create and complete a successful text.
- Develop flexible strategies for prewriting, researching, drafting, revising, editing, and proofreading.
- Understand writing as an open process that permits writers to use later invention and rethinking to revise their work.
- Understand the collaborative and social aspects of writing processes.
- Learn to critique their own and others' work.
- Use technologies appropriate to the writing process.

## Knowledge of Conventions

By the end of the required composition sequence, students should be able to do the following:

- Learn common formats for different kinds of texts.
- Demonstrate that different writing situations require different structural, stylistic, and mechanical conventions.
- Practice appropriate and ethical means of creating and documenting their work.
- Control such surface features as syntax, grammar, punctuation, and spelling

### **Comments:**

Writing instructors representing English departments in Kansas Public Institutions of Higher Education adapted this document from the “WPA Outcomes Statement for First-Year Composition” (adopted November 5, 1999 / modified September 15, 2006 / reapproved September 14, 2007).

## Comments:

## Core Outcomes:

The Introduction to Literature student will demonstrate a college-level ability to do the following:

- Communicate an awareness of the range and complexity of human experience as expressed through literature.
- Examine the interactions of reader and writer in the creation meaning.
- Articulate the distinctive features of various genres.
- Apply modes of critical inquiry specific to the discipline.
- Write thoughtful literary analysis using appropriate terminology and conventions.

**Comments:**

**Core Outcomes:**

Instructors may want to alter the order of the subjects that are listed below. Subjects may be arranged to accommodate both two-semester and three-semester syllabi.

Historical Literacy/Historian's Craft

Students should be able to demonstrate historical literacy through the following skills and competencies:

- Recognize history as a series of historiographical discussions.
- Think critically.
- Utilize the basic tools of the craft of history:
  - Research primary and secondary sources both in print and electronic forms.
  - Use library systems and search processes.
  - Analyze and synthesize historical materials and ideas.
  - Analyze and prioritize information.
  - Write and communicate clearly.
- Demonstrate an understanding of chronology and change over time.

Various Historical Perspectives and the Historian's Craft

Through clear communication, students should demonstrate an understanding and be able to analyze and synthesize some or all of the following historical lenses:

- Arts and literature
- Cultural identity
- Diffusions and encounters
- Economics
- Environment
- Ethnicity and race
- Gender
- Global thinking
- Intellectual culture
- Material culture
- Military developments
- Politics

- Influential individuals and ideas of leadership
- Social constructs
- Scientific/technological developments

### Origins and Characteristics of Prehistory

Relative to tracing and evaluating the origins and characteristics of prehistory, students should be able to do the following:

- Identify stages of human evolution.
- Analyze the characteristics of Paleolithic societies.
- Evaluate the impacts of the Neolithic transformation/revolution.

### Origins and Characteristics of the Earliest Major Civilizations

Students should be able to trace and evaluate the origins and characteristics of the earliest major civilizations, including the following:

- Mesopotamia
- Egypt
- Indus Valley
- China
- Sub-Saharan Africa
- Americas

### Significant Religious Traditions of the Ancient, Classical, and Medieval Worlds

Students should be able to describe and analyze the significant religious traditions of the ancient, classical, and medieval worlds, including the following:

- Primalism/indigenous religions
- Olympian religions
- Judaism
- Buddhism
- Confucianism
- Daoism
- Hinduism
- Zoroastrianism
- Christianity
- Islam

### Significant Political, Social, Economic, and Cultural Developments of the Ancient and Classical World

Students should be able to describe and analyze the significant political, social, economic, and cultural developments of the ancient and classical worlds, including the following:

- China
- Greece
- India
- Persia
- Hellenistic World

- Rome
- Americas

### Significant Political, Social, Economic, and Cultural Developments of the Post-Classical Civilizations

Students should be able to describe and analyze the significant political, social, economic, and cultural transformations, developments, and contributions of the post-classical civilizations, including the following:

- Transformation of the Roman world and development of post-Roman societies.
- Development of Byzantium and Christian Europe.
- Development and spread of Islam.
- Development and contribution of Southeast Asian cultures.
- Development and contribution of the Indian subcontinent.
- Development and contributions of Eurasian trade networks.

### Significant Political, Social, Economic, and Cultural Developments of the Nomadic Societies

Students should be able to describe and analyze the significant political, social, economic, and cultural developments of the Nomadic societies, including the following:

- Characteristics of Eurasian Nomadic societies.
- Impacts of Nomads on the development of civilizations.

### Significant Political, Social, Economic, and Cultural Developments of Sub-Saharan Africa, the Americas, and Oceania

Students should be able to describe and analyze the significant political, social, economic, and cultural developments of the Sub-Saharan Africa, the Americas, and Oceania between 1000 and 1500 C.E., including the following:

- Characteristics of Sub-Saharan Africa, the Americas, and Oceania.
- Impacts of Sub-Saharan Africa, the Americas, and Oceania on world cultures.

### Significant Political, Social, Economic, and Cultural Developments of Medieval European Civilizations

Students should be able to describe and analyze the significant political, social, economic, and cultural developments of medieval European civilizations, including the following:

- Characteristics of medieval European civilizations.
- Cultural interactions between Western Europe and the Islamic world.
- Cultural interactions between Western Europe, Sub-Saharan Africa, and South and East Asia.

### Significant Political, Social, Economic, Religious, and Cultural Developments of Global Integrations

Students should be able to describe and analyze the significant political, social, economic, and cultural developments of global integrations, including the following:

- Shaping of the Mongol Empire and its impact.
- Development of trade networks.
- European voyages of exploration.
- Formation and consequences of European colonization.
- Impacts of global interactions on world societies.

- Transformations of coercive labor systems, including serfdom and slavery.
- Similarities between Atlantic Basin and Indian Basin trade systems.

### Significant Political, Social, Economic, Religious, and Cultural Developments on the Eve of the Modern World

Students should be able to describe and analyze the significant political, social, economic, and cultural developments on the eve of the modern world, including the following:

- Development and trends in East Asia, 1500-1800.
- Developments and trends in the Islamic empires of the Savafids, Ottomans, and Mughal, India.
- Developments and trends in Sub-Saharan Africa.
- Developments and trends in Western Europe.
  - Renaissance and Reformation
  - Scientific Revolution
  - Absolutism and Constitutionalism
  - Enlightenment

### Significant Political, Social, Economic, Religious, and Cultural Developments of the Revolutionary West and the World

Students should be able to describe and analyze the significant political, social, economic, and cultural developments of the revolutionary West and the world, including the following:

- How the West revolutionized itself.
  - Revolutionary movements from 1776 to 1848.
  - Ideologies of the revolutionary era, including Liberalism, Conservatism, Democracy, Nationalism, Republicanism, and Socialisms.
  - Processes and consequences of the Industrial Revolution and Industrial Capitalism.
- Development of Imperialism.

### Significant Political, Social, Economic, Religious, and Cultural Developments of the Contemporary World

Students should be able to describe and analyze the significant political, social, economic, and cultural developments of the contemporary world, including the following:

- Crises in modern thought.
- Causes and global consequences of World War I.
- Bolshevik Revolution and the rise of Leninism and Stalinism.
- Causes and global consequences of World War II.
- Decline of European power and the shifting balance of global power and influence.
- Causes and global consequences of the Cold War.
- Anti-colonialism in Africa, Asia, Latin America, and the Middle East.
- Contemporary issues in a global context.

#### **Comments:**

Instructors may want to alter the order of the subjects that are listed. Subjects may be arranged to accommodate both two-semester and three-semester syllabi.

**Comments:**

## **Core Outcomes:**

Students will be expected to use appropriate technology as one tool to achieve the following outcomes:

### Arithmetic and Algebraic Manipulation

- Evaluate arithmetic expressions, including absolute value, using the order of operations and properties of real numbers.
- Evaluate algebraic expressions.
- Apply the laws of exponents to simplify expressions containing integer exponents.
- Express numbers in scientific notation.
- Perform addition, subtraction, multiplication, and division on polynomial expressions.
- Factor expressions with common factors, expressions that require grouping, trinomial expressions, and differences of squares.
- Perform addition, subtraction, multiplication, and division on rational expressions.
- Evaluate radicals, approximating those that are irrational.
- Simplify numeric radicals using the product and quotient rules.

### Equations and Inequalities

- Solve linear equations in one variable.
- Solve proportional equations.
- Solve linear inequalities in one variable, showing solutions on the real number line.
- Solve literal equations that do not require factoring.
- Solve quadratic equations by factoring.
- Develop and solve mathematical models including number, geometry, and percentage applications.

### Graphs on a Coordinate Plane

- Plot points correctly on a coordinate plane.
- Graph linear equations by plotting points.
- Graph linear equations by using intercepts.
- Graph linear equations using the y-intercept and slope.

### Analysis of Equations and Graphs

- Identify the x-intercept, y-intercept, and slope of a line, given its graph.
- Identify the x-intercept, y-intercept, and slope of a line, given its equation.
- Determine the equation of a line, given its graph, its slope and y-intercept, or its slope and a point on the line.
- Determine equations of both horizontal and vertical lines.
- Determine whether or not an equation is linear.
- Calculate the slope of a line passing through two given points.

**Comments:**

**Core Outcomes:**

Students will be expected to use appropriate technology as one tool to achieve the following outcomes:

Analysis and Graphing of Functions and Equations

- Use functional notation.
- Recognize and distinguish between functions and relations (equations).
- Use concepts of symmetry, intercepts, left- and right-hand behavior, asymptotes, and transformations to sketch the graph of various types of functions (constant, linear, quadratic, absolute value, piecewise-defined, square root, cubic, polynomial, rational, exponential, and logarithmic) or relations (circle) given in description.
- Determine the domain and range of a function.
- Write the equation that describes a function (for types given above) or circle given its description.
- Use graphs of functions for analysis.
- Find arithmetic combinations and composites of functions.
- Find the inverse of a function.

Solutions of Equations and Inequalities

- Solve equations listed in the third bullet above, i.e., literal equations, quadratic equations by factoring and the quadratic formula, equations involving rational expressions, equations involving radicals, and equations involving absolute value expressions, along with equations involving exponential or logarithmic functions.
- Solve inequalities of the following types: linear (in one and two variables), polynomial, rational, absolute value.
- Solve systems of inequalities by graphing.
- Apply equations from the first bullet in this core outcome to real-world situations, including but not limited to depreciation, growth and decay, and max/min problems.
- Examine and analyze data, make predictions/interpretations, and do basic modeling.
- Solve systems of equations by various methods, including matrices.

**Comments:****Core Outcomes:**

It is assumed that students entering an Intermediate Algebra course will have competencies from prerequisite courses. Students will be expected to use appropriate technology as one tool to achieve the following outcomes:

Arithmetic and Algebraic Manipulation

- Factor quadratic expressions, expressions of quadratic form, special forms, and factor by grouping.
- Perform addition, subtraction, multiplication, and division on rational expressions.
- Simplify complex fractions.
- Apply the laws of exponents to simplify expressions containing rational exponents.
- Apply the laws of radicals to perform addition, subtraction, and multiplication on expressions involving radicals. Rationalize denominators containing radicals.
- Simplify radicals containing negative radicands. Perform arithmetic operations on complex numbers.
- Evaluate functions using function notation.

Equations and Inequalities

- Solve linear inequalities in one variable showing solutions both on the real number line and in interval notation.
- Solve literal equations, including those that require factoring.
- Solve systems of linear equations in two variables.
- Solve equations by factoring and quadratic formula.
- Solve equations containing rational expressions.
- Solve equations involving radicals.
- Solve linear absolute value equations and inequalities in one variable.
- Develop and solve mathematical models including variation, mixture, motion, work, and geometrical applications.

Graphs on a Coordinate Plane

- Graph linear inequalities.
- Graph quadratic functions.

Analysis of Equations and Graphs

- Determine an equation of a line given either sufficient information (two points) or a particular condition (perpendicular to a given line, parallel to a given line through a specific point, through a specific point with a given slope, etc.).
- Calculate the distance between two points.
- Distinguish between functions and relations using the Vertical Line Test.
- Identify the domain and range of a function given its graph.

**Comments:**

**Core Competencies:**

It is assumed that students entering a Trigonometry course will have competencies from previous courses. Students will be expected to use appropriate technology as one tool to achieve competency in this course. The student will:

1. Understand the basic definitions of trigonometric functions using both a right triangle and the unit circle.
2. Solve right triangles, and know trigonometric function values for special angles.
3. Understand radian definition and measurement, and understand circular functions as real-valued functions.

4. Analyze the graphs of the six basic trigonometric functions and their arithmetic combinations using the concepts of period, phase shift, amplitude, and displacement.
5. Derive/verify trigonometric identities, including but not limited to double angle, half angle, angle sum and angle difference identities.
6. Define, graph, and analyze inverse trigonometric functions.
7. Solve equations involving trigonometric functions.
8. Find solutions of oblique triangles using the Law of Cosines or Law of Sines.
9. Solve applications, including but not limited to vectors.

## Comments:

## Core Outcomes:

(Content Outline and Competencies for Engineering Calculus I)

### Using Limits

- Evaluation of Limits
  - Evaluate the limit of a function at a point both algebraically and graphically.
  - Evaluate the limit of a function at infinity both algebraically and graphically.
  - Use the definition of a limit to verify a value for the limit of a function.
- Use of Limits
  - Use the limit to determine the continuity of a function.
  - Apply the Intermediate-Value Theorem.
  - Use the limit to determine differentiability of a function.
- Limiting Process
  - Use the limiting process to find the derivative of a function.

### Finding Derivatives

- Find derivatives involving powers, exponents, and sums.
- Find derivatives involving products and quotients.
- Find derivatives involving the chain rule.
- Find derivatives involving exponential, logarithmic, and trigonometric functions.
- Find derivatives involving hyperbolic and inverse trigonometric functions.\*
- Find derivatives involving implicit differentiation.
- Use the derivative to find velocity, acceleration, and other rates of change.
- Use the derivative to find the equation of a line tangent to a curve at a given point.

### Using Derivatives

- Curve Sketching
  - Use the first derivative to find critical points.
  - Apply the Mean-Value Theorem for derivatives.
  - Determine the behavior of a function using the first derivative.
  - Use the second derivative to find inflection points.
  - Determine the concavity of a function using the second derivative.
  - Sketch the graph of the function using information gathered from the first and second derivatives.
  - Interpret graphs of functions.
- Applications of Derivatives
  - Use optimization techniques in areas such as economics, the life sciences, the physical sciences, and geometry.
  - Solve related rates problems.
  - Use Newton's Method.
  - Use differentials to estimate change.
  - Find limits using L'Hopital's Rule.\*

### Finding Integrals

- Find area using Riemann sums and integrals.
- Express the limit of a Riemann sum as a definite integral.
- Evaluate the definite integral using geometry.
- Integrate algebraic, exponential,\* and trigonometric functions.
- Evaluate definite integrals using the Fundamental Theorem of Calculus.
- Apply the Mean-Value Theorem for integrals.
- Integrate indefinite integrals.
- Integrate using substitution.
- Integrate using numerical techniques.
- Integrate using integration by parts and trigonometric substitutions\*
- Evaluate improper integrals\*

### Using the Integral

- Solve a differential equation by separation of variables.\*
- Solve initial value problems.\*
- Solve applications of exponential increase and decrease.\*
- Compute areas and volumes using shell and disk methods; compute arc lengths and the average value of a function.\*
- Applications to physics, engineering, and geometry (solid figures).\*

\*Some Regents Universities require these topics for admission to Calculus II.

### **Comments:**

(The following statement was composed by Dr. Jack Porter of the University of Kansas and Prof. Jeff Frost of Johnson County Community College. Although the group agreed that such a statement should be inserted into the standards, the text of the statement was not voted on by the group. )

*Kansas Public College and University mathematics professors believe that a strong foundation in the concepts of calculus will lead to success in careers that have a strong emphasis in critical thinking, such as engineering, computer science, or biotechnology. However, this will not happen if calculus is taught at primarily a skills and formula level without sufficient time to engage students in the deeper, conceptual tenets of calculus. All calculus teachers have an obligation to the mathematics community to ensure that students completing a first-semester, mainstream calculus course understand the material in a rigorous fashion at the level required to pass the AP Calculus examinations AB and BC.*

*In addition to the core outcomes for Calculus I agreed upon at the Wichita meetings (September 2008), a few schools believe that a first course in calculus with a longer list of competencies will better prepare students who are working toward degrees in math-related fields. Specifically, the University of Kansas and Johnson County Community College have course outlines that cover additional topics beyond the core competencies. Because of these additional topics, students attempting to transfer into one of these colleges may find the need to take additional calculus courses.*

## Comments:

## Core Outcomes:

Students will be expected to use appropriate technology as one tool to achieve the following outcomes:

### Basic Descriptive Statistics: Organizing and Describing Data

- For a given set of data, draw a dotplot, histogram, stem-and-leaf diagram, and a boxplot.
- Describe the general shape of data, skewed left, skewed right, normal, or other symmetric.
- Calculate the measures of central tendency including mean, median, and mode.
- Calculate the measures of dispersion including range, standard deviation, and interquartile range; explain the meaning of dispersion as it relates to a problem.
- Use a statistical package on a graphics calculator or a computer to enter data and analyze results.

### Introduction to Probability: Finding the Theoretical Probability of an Event

- Use probability notation including the “or” condition and the “and” condition.
- Determine whether or not two events are mutually exclusive.
- Determine whether or not two events are independent.
- Calculate conditional probabilities; explain the meaning of conditional probabilities; use conditional notation.

### Random Variables: Determining Probabilities of a Random Variable

- Determine the expected value and the standard deviation of a discrete random variable.
- Determine probabilities for a discrete random variable.

### Special Probability Functions: Using Functions to Solve Probabilities of Events

- Use the binomial formula to solve probability problems with two outcomes and independent events.
- Use the normal distribution to solve percent problems for normally distributed populations.
- Use the normal distribution to solve probability problems for normally distributed random variables.

### Random Sampling and Sampling Theory: Generating Distributions for Sample Means

- Calculate the mean for a distribution of sample means.
- Calculate the standard deviation for a distribution of sample means.
- Perform a normal probability plot; describe the shape of the population distribution based on the plot.
- Analyze the Central Limit Theorem.

### Estimating the Mean: Using Statistics to Determine Averages of a Population

- Construct confidence interval for a population mean with known population standard deviation; explain the meaning in terms of the problem.
- Construct a confidence interval for a population mean with unknown population standard deviation; explain the meaning in terms of the problem.
- Construct a confidence interval for a population proportion; explain the meaning in terms of the problem.

### Hypothesis Tests: Finding Significance

- Perform a hypothesis test for a sample mean with known population standard deviation.
- Perform a hypothesis test for a sample mean with unknown population standard deviation.
- Perform a hypothesis test for a sample proportion.
- Perform a hypothesis test with more than two categories for procedures using the chi-square distribution (optional).
- Explain Type I and Type II errors with respect to a problem (optional).
- Calculate the P-value of a hypothesis test; explain the meaning in terms of the problem.

### Linear Regression: Making Predictions with Linear Data

- Calculate a linear regression equation; explain the meaning in terms of the problem.
- Use a linear regression equation to make predictions about data.
- Calculate the coefficient of determination for a linear regression equation; use the coefficient of determination to explain the strength of the regression equation.

**Comments:**

Core Competencies for Ethics

By its nature, Philosophy encourages diverse approaches to teaching, and so it is to be expected that different programs and different instructors can approach an Ethics course in very different ways. Consequently, a broad consensus on details of content is not to be expected. However, students will become familiar with the basic concepts and methods of moral philosophy, their application to specific moral problems, and aspects of the rich history of moral philosophy as chosen by their particular instructors. Students will:

1. Demonstrate an understanding of the significance of moral philosophy in a broader context.
  - A. Students will show familiarity with the philosophical development of various normative ethical theories
  - B. Students will recognize key characteristics of philosophical inquiry such as its emphasis on careful reasoning and analysis and how it differs from other kinds of inquiry
  - C. Students will be able to apply moral theories to ethical problems.
  
2. Demonstrate familiarity with and understanding of basic ethical theories, terminology and concepts.
  - A. Students will demonstrate an understanding of major normative ethical theories, schools of thought, or problems within ethics as chosen by the instructor. Examples might include deontology, utilitarianism, virtue ethics, moral objectivity, etc.
  - B. Students will be able to explain key ethical terms as they are understood within ethical theories (examples might include good, rights, duty, happiness, etc.) or as applied to ethical problems such as the permissibility of abortion, capital punishment, our duties to animals, etc.
  
3. Demonstrate an ability to identify and develop philosophical analyses and arguments based on philosophical reasoning.
  - A. Students will be able to provide good reasons in support of competing philosophical claims
  
4. Demonstrate an ability to evaluate philosophical arguments, and texts focusing on moral theories and problems, and state alternative points of view.
  - A. Students will be able to evaluate competing theories and arguments, providing their own positions supported by valid arguments.

By its nature, Philosophy encourages diverse approaches to teaching, and so it is to be expected that different programs and different instructors can approach an Introduction of Philosophy course in very different ways. Consequently, a broad consensus on details of content is not to be expected. However, students in an Introduction to Philosophy course will become familiar with the basic concepts and methods of philosophy and those aspects of its rich history chosen as a focus by their particular instructors. Students will:

1. Demonstrate an understanding of the significance of philosophy in a broader cultural and historical context.
  - A. Students will show familiarity with the development of various philosophical tradition during some of their major periods
  - B. Students will recognize key characteristics of philosophical inquiry such as its emphasis on careful reasoning and analysis and how it differs from other kinds of inquiry
  
2. Demonstrate familiarity with and understanding of basic philosophical theories, terminology and concepts.
  - A. Students will show familiarity with the major division of Philosophy as determined by the individual instructor. Examples might include Epistemology, Metaphysics and Ethics.
  - B. Students will be able to explain key philosophical terms as within historical periods (examples might include the Ancient Greeks, Romans, or Modern Philosophy), schools of thought (examples might include rationalism, empiricism an existentialism), or within problems in philosophy (examples might include the existence of God, the free will/determinism question, etc.)
  - C. Students will demonstrate understanding of major philosophical theories within historical periods, schools of thought or problems within philosophy as chosen by the instructor.
  
3. Demonstrate an ability to identify and develop philosophical analyses and arguments based on philosophical reasoning.
  - A. Students will show an understanding of the difference between valid and fallacious arguments and will be able to recognize examples of each.
  - B. Students will be able to provide good reasons in support of contentious philosophical claims
  
4. Demonstrate an ability to evaluate philosophical analyses, arguments, and texts and appreciate alternative points of view.
  - A. Students will show familiarity with some classic philosophical arguments within historical periods (examples might include Plato and Aristotle on the Theory of Forms), within schools of thought (examples might include Descartes and Hume on innate ideas), or within problems in philosophy (examples might include those for and against the reality of free will, the existence of God, the possibility of certainty, etc.)
  - B. Students will be familiar with a variety of philosophical positions on contentious issues such as the nature of the mind, the sources of knowledge, and the nature of the good.
  - C. Students will be able evaluate competing theories and arguments, providing their own positions supported by valid arguments.

**Discipline:** Psychology

**General Course Title:** General Psychology

**Date Developed (and any modification):** October 1, 2007

**Courses from Each Participating College/University for which Core Outcomes Apply:**

Course Title	Course Number	Institution
General Psychology	PSY 101	Allen County CC
General Psychology	PSYC 1000	Barton County CC
General Psychology	BS 160	Butler CC
General Psychology	SS101	Cloud County CC

General Psychology	PSYCH 104	U Kansas
Basic Concepts in Psychology	PY 100	Washburn U
General Psychology	PSYCH 111	Wichita State U

**Comments:**

**Core Outcomes:**

Students who successfully complete the General Psychology course should be able to do the following:

- Assess principles and principal proponents of psychological theories using accepted research methods of scientific inquiry.
- Demonstrate an understanding of the biological basis of behavior including physiology of the brain.
- Explain learning theories and cognitive processes.
- Describe theories and applications of motivation and emotion.
- Demonstrate an understanding of human life span development, and discriminate among its major domains.
- Identify and describe the major theories of personality, detailing the major disorders, their treatments, and/or therapy.
- Specify how the individual, a group, and the environment influence social interaction.

**Comments:**

This statement outlines the core competencies for the Introduction to Sociology course in Kansas higher education. This document intentionally defines only “outcomes,” or types of results, and not “standards,” or precise levels of achievement. The setting of standards is left to specific institutions or specific groups of institutions.

**Core Outcomes: (list core outcomes in total including the updates)**

Upon successful completion of the following units, the students will be able to:

- I. Foundations of Sociology
  - A. Trace the history and philosophy of sociology.
  - B. Apply the sociological imagination.
  - C. Compare and contrast the major sociological perspectives.
  - D. Identify and describe sociological research methods and related ethical issues.
  
- II. Foundations of Society
  - A. Define and explain the major components of culture.
  - B. Compare and contrast the major types of societies.
  - C. Describe the process of socialization.
  - D. Analyze the components of social structures.
  - E. Demonstrate a basic knowledge of social interaction.
  - F. Compare and contrast the major theories of deviance and types of social control.
  
- III. Social Inequality
  - A. Compare and contrast the major theoretical explanations of social inequality.
  - B. Identify the local, national, and global dimensions of social stratification.
  - C. Explain and assess the inequalities associated with class, gender, sexual orientation, age, race, and ethnicity.
  
- IV. Social Institutions
  - A. Explain the fundamental significance of social institutions, such as economic, political, educational, religious, family, etc.
  - B. Describe the significant features of and illustrate the interrelationships among the major social institutions.
  
- V. Social Change
  - A. Explain the dynamics of social change, such as population, environment, industrialization, urbanization, technology, etc.
  - B. Analyze the dimensions of collective behavior, social movements and social change in local, national and global contexts.

**Comments:**

**Core Outcomes: (list core outcomes in total including the updates)**

This statement outlines the core competencies for social problems courses in Kansas higher education. This document intentionally defines only “outcomes” or types of results, and not “standards,” or precise levels of achievement. The setting of standards is left to specific institutions or specific groups of institutions.

- I. Foundations of Social Problems
  - b. Distinguish social problems from personal problems
  - c. Compare and contrast the major theoretical perspectives in relation to social problems
  - d. Identify and describe research methods and ethical issues
  
- II. Social Problems: Political and Economic
  - a. Evaluate major economic systems in historical and cross-cultural perspectives
  - b. Analyze and construct models of power and authority
  - c. Describe the relationship between political and economic systems
  
- III. Social Structure and Social Inequality: Distribution of Wealth, Income and Power
  - a. Describe the impact of social stratification system and social class
  - b. Explain prejudice and discrimination related to:
    1. race and ethnicity
    2. gender, sex, and sexual orientation
    3. age
  - c. Describe how education impacts social inequality
  
- IV. Relationships Among Social Institutions
  - a. Analyze the changes in families that lead to social problems
  - b. Describe problems associated with the criminal justice systems
  - c. Examine access and barriers to health care systems
  - d. Assess the opportunities and limitations of the educational system
  
- V. Social Change
  - a. Analyze the social impact of population growth and the environment
  - b. Explain how participation in collective action and social movements contributes to both the cause and alleviation of social problems

**Sociology of Families course outcomes and competencies**

I. Foundations of Marriage and Family

- a. Define the concept of marriage and describe and define various family types.
- b. Compare and contrast families of the past with contemporary families
- c. Assess the influences of political, economic, and cultural structures on families
- d. Analyze families in cross-cultural perspective
- e. Distinguish between sex and gender
- f. Compare and contrast etc: same

g. Identify and describe research methods and ethical issues in the study of families

## II. Intimate Relationships

- a. Assess the concept of love as a historical and social construction
- b. Compare and contrast the mate selection process from historical and cross-cultural perspectives
- c. Compare and contrast sexual identities and behaviors as historical and social constructions
- d. Discuss the effects of children on intimate relationships
- e. Examine communication in intimate relationships

## III. Family Life

- a. Describe the stages of family life cycles
- b. Examine sexuality in the context of family life
- c. Identify family planning options
- d. Examine the process of parenting
- e. Explain how work and family affect each other

## IV. Inequalities and Challenges in Families

- a. Analyze the intersection of race, ethnicity, social class, and gender in contemporary families
- b. Examine effects of political, economic, and cultural changes on families
- c. Discuss power in families
- d. Identify the causes and effects of violence and abuse in families
- e. Compare and contrast ways of resolving conflicts

## Comments:

Minimum Core Competencies for Speech: The following document is published by The National Communication Association (NCA) and has been adopted by the Kansas Speech Educators in Higher Education Interest Group as the minimum core competencies for the basic communication course (January 2001). This document was updated in 2004 and again in 2007 to reflect accuracy in course titles and course numbers (September 2007).

### Part One Expected Student Outcomes for Speaking and Listening: Basic Communication Course and General Education

The following student outcomes represent some of the expectations for students taking a basic communication course and/or participating in the general education requirements of a school. Basic course or general education students need speaking and listening skills that will help them succeed in future courses and on the job. They need to be able to construct and deliver messages and listen with literal and critical comprehension. The basic course can provide knowledge of effective communication techniques, an arena for developing and practicing skills, and positive feelings about communicating in the future. Instructors and administrators could use some or all of the expected student outcomes to inform the design of a basic communication course. Academic institutions could use some or all of the outcomes to describe campus expectations for students in regard to the general education curriculum (Rosenbaum, 1994). Note: The content under Core Outcomes was originally published in a table by NCA in 1990 as “Communication Is Life: Essential College Sophomore Speaking and Listening Competencies” for a basic communication course and general education. Some definitions have been updated from the original publication, and editing changes have been made to achieve more consistency.

## Core Outcomes:

***SPEAKING COMPETENCIES (Quianthy, 1990):*** *Speaking is the process of transmitting ideas and information orally in a variety of situations. Effective oral communication involves generating messages and delivering them with attention to vocal variety, articulation, and nonverbal signals.*

*The **COMPETENT SPEAKER** must be able to compose a message and provide ideas and information suitable to the topic, purpose, and audience. Specifically, the competent speaker should exhibit the following competencies by demonstrating the abilities included under each statement:*

### Determine the Purpose of Oral Discourse

- Identify the various purposes for discourse.
- Identify the similarities and differences among various purposes.
- Understand that different contexts require differing purposes.
- Generate a specific purpose relevant to the context when given a general purpose.

### Choose a Topic and Restrict It According to the Purpose and the Audience

- Identify a subject that is relevant to the speaker’s role, knowledge, concerns, and interests.
- Narrow the topic adapting it to the purpose and time constraints for communicating.
- Adapt the treatment of the topic to the context for communication.

### Fulfill the Purpose of Oral Discourse

- Formulate a thesis statement.
  - Use a thesis as a planning tool.
  - Summarize the central message in a manner consistent with the purpose.
- Provide adequate support material.
  - Demonstrate awareness of available types of support.
  - Locate appropriate support materials.
  - Select appropriate support based on the topic, audience, setting, and purpose.
- Select a suitable organizational pattern.
  - Demonstrate awareness of alternative organizational patterns.
  - Demonstrate understanding of the functions of organizational pattern, including the following:
    - Clarification of information.
    - Facilitation of listener comprehension.
    - Change of attitude.
    - Relational interaction.
    - Selection of organizational patterns that are appropriate to the topic, audience, context, and purpose.
- Demonstrate careful choice of words.
  - Demonstrate understanding of the power of language.
  - Select words that are appropriate to the topic, audience, purpose, context, and speaker.
  - Use word choice in order to express ideas clearly, to create and maintain interest, and to enhance the speaker's credibility.
  - Select words that avoid sexism, racism, and other forms of prejudice.
- Provide effective transitions.
  - Demonstrate understanding of the types and functions of transitions.
  - Use transitions to accomplish the following:
    - Establish connectedness.
    - Signal movement from one idea to another.
    - Clarify relationships among ideas.

*The **COMPETENT SPEAKER** must also be able to transmit the message by using delivery skills suitable to the topic, purpose, and audience. Specifically, the competent speaker should exhibit the following competencies by demonstrating the abilities included under each statement.*

### Employ Vocal Variety in Rate, Pitch, and Intensity

- Use vocal variety to heighten and maintain interest.
- Use a rate that is suitable to the message, occasion, and receiver.
- Use pitch (within the speaker's optimum range) to clarify and to emphasize.
- Use intensity appropriate for the message and audible to the audience.

### Articulate Clearly

- Demonstrate knowledge of the sounds of the American English language.
- Use the sounds of the American English language.

### Employ Language Appropriate to the Designated Audience

- Employ language that enhances the speaker's credibility, promotes the purpose, and the receiver's understanding.
- Demonstrate that the use of technical vocabularies, slang, idiomatic language, and regionalisms may facilitate understanding when communicating with others who share meanings for those terms, but can hinder understanding in those situations where meanings are not shared.
- Use standard pronunciation.
- Use standard grammar.
- Use language at the appropriate level of abstraction or generality.

### Demonstrate Nonverbal Behavior that Supports the Verbal Message

- Use appropriate paralanguage (extraverbal elements of voice such as emphasis, pause, tone, etc.) that achieves congruence and enhances the verbal intent.
- Use appropriate kinesic elements (posture, gesture, and facial expression) that achieve congruence and enhance the verbal intent.
- Use appropriate proxemic elements (interpersonal distance and spatial arrangement) that achieve congruence and enhance the verbal intent.
- Use appropriate clothing and ornamentation that achieve congruence and enhance the verbal intent.

The **COMPETENT SPEAKER** must also be able to transmit messages using interpersonal skills suitable to the context and the audience. Specifically, the competent speaker should exhibit interpersonal competence by demonstrating the following abilities:

- Show appropriate interpersonal skills for various contexts.
- Display self-awareness as a communicator.
- Select from a repertoire of interpersonal skills those strategies that enhance relationships.
- Use a conversational mode through self-presentation and response to feedback.

**LISTENING COMPETENCIES:** *Listening is the process of receiving, constructing meaning from, and responding to spoken and or nonverbal messages. People listen in order to comprehend information, critique and evaluate a message, show empathy for the feelings expressed by others, or appreciate a performance. Effective listening includes both literal and critical comprehension of ideas and information transmitted in oral language.*

The **COMPETENT LISTENER** must be able to listen with literal comprehension. Specifically, the competent listener should be able to exhibit the following competencies by demonstrating the abilities included under each statement.

### Recognize Main Ideas

- Distinguish ideas fundamental to the thesis from material that supports those ideas.
- Identify transitional, organizational, and nonverbal cues that direct the listener to the main ideas.
- Identify the main ideas in structured and unstructured discourse.

### Identify Supporting Details

- Identify supporting details in spoken messages.
- Distinguish between those ideas that support the main ideas and those that do not.
- Determine whether the number of supporting details adequately develops each main idea.

### Recognize Explicit Relationships among Ideas

- Demonstrate an understanding of the types of organizational or logical relationships.
- Identify transitions that suggest relationships.
- Determine whether the asserted relationship exists.

### Recall Basic Ideas and Details

- Determine the goal for listening.
- State the basic cognitive and affective contents, after listening.

The **COMPETENT LISTENER** must also listen with critical comprehension. Specifically, the competent listener should exhibit the following competencies by demonstrating the abilities included under each statement.

### Attend with an Open Mind

- Demonstrate an awareness of personal, ideological, and emotional biases.
- Demonstrate awareness that each person has a unique perspective.
- Demonstrate awareness that one's knowledge, experience, and emotions affect listening.
- Use verbal and nonverbal behaviors that demonstrate willingness to listen to messages when variables such as setting, speaker, or topic may not be conducive to listening.

### Perceive the Speaker's Purpose and Organization of Ideas and Information

- Identify the speaker's purpose.
- Identify the organization of the speaker's ideas and information.

### Discriminate Between Statements of Fact and Statements of Opinion

- Distinguish between assertions that are verifiable and those that are not.

### Distinguish Between Emotional and Logical Arguments

- Demonstrate an understanding that arguments have both emotional and logical dimensions.
- Identify the logical characteristics of an argument.
- Identify the emotional characteristics of an argument.
- Whether the argument is predominantly emotional or logical.

### Detect Bias and Prejudice

- Identify instances of bias and prejudice in a spoken message.
- Specify how bias and prejudice may affect the impact of a spoken message.

### Recognize the Speaker's Attitude

- Identify the direction, intensity, and salience of the speaker's attitude as reflected by the verbal messages.
- Identify the direction, intensity, and salience of the speaker's attitude as reflected by the nonverbal messages.

### Synthesize and Evaluate by Drawing Logical Inferences and Conclusions

- Draw relationships between prior knowledge and the information provided by the speaker.
- Demonstrate an understanding of the nature of inference.
- Identify the types of verbal and nonverbal information.
- Draw valid inferences from the information.
- Identify the information as evidence to support views.
- Assess the acceptability of evidence.
- Identify patterns of reasoning and judge the validity of arguments
- Analyze the information and inferences in order to draw conclusions.

### Recall the Implications and Arguments

- Identify the arguments used to justify the speaker's position.
- State both the overt and implied arguments.
- Specify the implications of these arguments for the speaker, audience, and society at large.

### Recognize Discrepancies between the Speaker's Verbal and Nonverbal Messages

- Identify when the nonverbal signals contradict the verbal message.
- Identify when the nonverbal signals understate or exaggerate the verbal message.
- Identify when the nonverbal message is irrelevant to the verbal message.

### Employ Active Listening Techniques When Appropriate

- Identify the cognitive and affective dimensions of a message.
- Demonstrate comprehension by formulating questions that clarify or qualify the speaker's content and affective intent.
- Demonstrate comprehension by paraphrasing the speaker's message.

### **Comments:**

### **Participants:**

Patricia L. Griffin, **Facilitator**      Hays State U      [pgriffin@fhsu.edu](mailto:pgriffin@fhsu.edu)

**Discipline:** Theatre

**General Course Title:** Stagecraft

**Date Developed (and any modification):** October 2, 2009

**Courses from Each Participating College/University for which Core Outcomes Apply:**

Course Title	Course Number	Credit Hours	Currently Adopted Textbook	Institution
				Allen County CC
				Barton County CC
				Butler CC
				Cloud County CC
				Coffeyville CC
				Colby CC
				Cowley County CC
				Dodge City CC
				Emporia State U
				Fort Hays State U
				Fort Scott CC
				Garden City CC
				Highland CCC
				Hutchinson CC
				Independence CC
				Johnson County CC
				Kansas City Kansas CC
				Kansas State U
				Labette CC
				Neosho County CC
				Pittsburg State U
				Pratt CC
				Seward County CC
				U Kansas
				Washburn U
				Wichita State U

**Comments:**

**Core Outcomes:**

The student will demonstrate comprehensive and safe working knowledge of stage systems and machinery, support areas, and construction tools.

Shop/Theatre Safety:

- Msd sheets
- Emergency action plan
- Egress
- Moving scenery
- Equity and safety lights (run lights)
- OSHA

Tools:

- Written test
- Hands on proficiency

The student will demonstrate professional technical methods and procedures used to realize a production.

Scenic Unit Construction Techniques

Drafting

- Reading a blueprint-understanding different views
- Graphics and standards

Scenic Painting

- Color
- Supplies and tools
- Texture and techniques

Rigging

- Safety
- Knots
- Hardware
- Written Test
- Hands on proficiency

Lighting production (not design)

- Electricity
- Lamps
- Dimmer Control
- Basic area lighting and focusing

Sound production (not design)

Props

**Comments:**

**Core Outcomes:**

Upon completion of the Acting 1 course, the successful student will be able to do the following:

- Apply acting terminology.
- Utilize the actor's instrument.
- Demonstrate a systematic approach to acting.

**Comments:**

The first outcome addresses basic vocabulary with which an actor should know and be comfortable. Competencies for the second outcome would include any work the instructor uses to develop the actor's voice, body, imagination, concentration, observation, etc. The competencies for the third outcome would include any specific technique the instructor is using as well as script analysis, development of character, playing actions and tactics, working with a partner, rehearsing a scene, performing a piece, etc. John Uthoff noted that KSU requires its Acting 1 students to have script analysis as part of their coursework. Transfer students to KSU who do not have that competency would need to re-take the course as a prerequisite for more advanced courses.

## **Minutes of the September 24, 2010, Meeting**

## **Anthropology Minutes**

**Discipline:** Anthropology

**Date:** Sept 24, 2010

**Facilitator:** William McFarlane (JCCC)

**Members Present:**

Blakeslee, Donald	Wichita State University	<a href="mailto:donald.blakeslee@wichita.edu">donald.blakeslee@wichita.edu</a>
Davis-Stephens, Linda	Colby CC	<a href="mailto:Linda.davis-stephens@colby.cc.edu">Linda.davis-stephens@colby.cc.edu</a>
Fraye, David	University of Kansas	<a href="mailto:frayer@ku.edu">frayer@ku.edu</a>
Harris, Sara	Labette CC	<a href="mailto:sarah@labette.edu">sarah@labette.edu</a>
McFarlane, William	JCCC	<a href="mailto:macfarlane@jccc.edu">macfarlane@jccc.edu</a>
Ritterbush, Lauren	Kansas State University	<a href="mailto:LRitterb@ksu.edu">LRitterb@ksu.edu</a>
Sundal, Mary	Washburn University	<a href="mailto:mary.sundal@washburn.edu">mary.sundal@washburn.edu</a>
Yang, Wayne	Kansas City Kansas CC	<a href="mailto:wyang@kckcc.edu">wyang@kckcc.edu</a>

Upon completion of an introductory course in physical or biological anthropology students should be able to demonstrate an understanding of the following:

Demonstrate knowledge of Evolutionary Theory

- The historical development of evolutionary theory through contemporary approaches
- The basic forces and concepts underlying the modern evolutionary synthesis, for example: Molecular Genetics, Inheritance, and Microevolution

Characterize the Primates

- Primate characteristics
- Primate taxonomy and classification
- Behavioral ecology (reproductive strategies, life histories, diet, sociality, cooperation and conflict)

Trace Primate and Human Evolution

- Methodology and Interpretive Frameworks in Paleoanthropology
- Fossil primate and human taxonomy and classification
- Biocultural approaches to human evolution (bipedalism, tool-use, brain growth, language, intelligence)

Describe Human Variation and Adaptation

- Modern polygenetic variation and global patterns of adaptation
- Concept of race
- Patterns of modern human adaptation (thermal environmental stress, high altitude stress, nutritional deficiency, disease)
- Culture as adaptation

## Computer Science Minutes

**Discipline:** Computer Science

**Date:** 9/24/10

Wyatt, Bill	Kansas City Kansas Community College	<a href="mailto:bwyatt@kckcc.edu">bwyatt@kckcc.edu</a>

**Meeting Notes:**

**Course/Core outcomes discussion:**

- General Education requirement information: Chan Tung requested for members to email him information about their "Computer Concept and Application course." Is this course a general education course required at your college? Three colleges present at the meeting currently require the introductory course as a general education requirement.
- The group members were also requested to send Chan Tung the titles of their courses and current textbooks.

- The current class delivery was discussed by members. The discussion in the group about the course delivery was that the course is being offered in a variety of methods: as an onsite course, online course and a hybrid course.
- There was also a discussion of standardization of courses at colleges. Members discussed if the course content delivery was standardized for each section of their college. There was a variety of responses from members with some colleges having structured assignments and exams for all sections.
- The group discussed the general education recommendation for the introductory computer course and prepared the following statement to be presented to the Kansas Board of Regents:
  - The Computer Science discipline group proposes the introductory computer course as a graduation requirement from a Kansas Board of Regents university in compliance with Foresight 2020 objective 4 -Foundation skills.
- The group reviewed and edited the current ten core outcomes for the course. This is the updated list:

### **Core Outcomes:**

In the areas listed, students should be able to do the following:

#### Hardware

- Demonstrate the understanding of specifications and configuration of computer hardware.

#### Operating Systems and Systems Software

- Identify the major roles of operating systems and systems software.

#### Internet

- Identify the impact, use, and information evaluation of the Internet.

#### Word Processing

- Use word processing software to create, edit and produce professional documents.

#### Spreadsheets

- Create spreadsheets and charts to analyze, investigate and/or interpret data to support problem solving process.

#### Database

- Design, create, maintain a database, and to produce easy access to information in multiple dimensions.

#### Presentation

- Use presentation software to create, edit, and produce professional presentations.

#### Integration

- Utilize the integration between different application software and technology.

#### Ethical Issues and Concepts

- Identify the ethical and social standards of conduct regarding the use of information and technology.

Cyber security

- Identify security threats and solutions.

The group adjourned the meeting at 11:00 AM.

Submitted by Sharon Lawless

### Opening

The meeting, facilitated by Andy Anderson (Johnson CCC) opened with introductions by those in attendance. Andy reviewed the agenda with the addition of an item to discuss assessment instruments.

### Announcements

KATE – Kansas Association of Teachers of English annual conference – October 7 & 8

Gibbon Lecture – Labette Community College – October 15

### Review of KBOR Strategic Goals

- Discussed KBOR articulation and graduation goals: how will these goals affect community colleges?
  - Members expressed concern over whether faculty with low retention rates would somehow be targeted for administrative action.
- Discussed alignment of KBOR and KSDE goals. KBOR and KSDE are working together to align K-12 and post-secondary curriculum. KSDE standards are posted online at <http://www.ksde.org/Default.aspx?tabid=1678>. Members questioned

- Will students who “pass” the standardized writing assessment actually be prepared for the rigors of college-level writing?
- What will happen to students who do not graduate or who cannot pass core courses (particularly writing-intensive courses).
- The KSDE is involved with The Partnership for 21st Century Skills (<http://www.p21.org/index.php>) which has an initiative intended to move assessment efforts toward evaluation of actual performance rather than standardized testing so that students’ performance follows with them and informs their future coursework
- Kansas is a “governing” state in the SMARTER Balanced Assessment Consortium (SBAC) <http://www.k12.wa.us/SMARTER/>. SBAC is described on the SBAC web site:

**The SMARTER Balanced Assessment Consortium (SBAC)** is a collection of more than 30 states that have been working collaboratively since December 2009 to develop a student assessment system aligned to a common core of academic content standards to apply for a Race-to-the-Top Assessment grant. On the Sept. 2, 2010, the SBAC was awarded a four-year \$176 million Race to the Top assessment grant by the US Department of Education (USED) to develop a student assessment system aligned to a common core of academic standards.

SBAC will create state-of-the-art adaptive online exams, using “open source” technology. The online system will provide accurate assessment information to teachers and others on the progress of all students, including those with disabilities, English language learners and low- and high-performing students. The system will include:

- the required summative exams (offered twice each school year);
- optional formative, or benchmark, exams; and
- a variety of tools, processes and practices that teachers may use in planning and implementing informal, ongoing assessment. This will assist teachers in understanding what students are and are not learning on a daily basis so they can adjust instruction accordingly.

- With KBOR and KSDE goals aligned, we must clearly articulate what constitutes “college-level” writing. Various strategies were discussed with no consensus determined.

### **Assessment Instruments**

Stephannie Goerl, Barton Community College, asked the group what types of instruments are currently being used to assess writing. All institutions are using a writing assignment scored with a rubric. Members agreed that rubrics useful for reflection on student performance; clarifying our expectations and making transparent what students should be able to do.

There was extensive discussion related to effective writing assessment strategies.

Meeting adjourned with the following reminders:

- Members will send rubrics to Andy. All rubrics are welcome! Label rubrics as specific assignment rubrics or those used for course-level or department-level assessment.
- Send names of Institutional Research and/or Assessment Directors (whoever does assessment quantification for the institution)
- The English Group definitely wishes to meet again next year.

## Mathematics Minutes

**Discipline:** Mathematics

**Date:** 9/24/2010

**Facilitator:** Jeff Frost, Johnson County Community College

**Members present:**

Anthony, Adam	Wichita State University
Bach, Michele	Kansas City Kansas CC
Balman, Brian	JCCC
Bayer, Margaret	University of Kansas
Earles, Katherine	Wichita State University
Edmonds, Brenda	JCCC
Flaherty, Kelly	Baker University
Flood, Tim	Pittsburg State University
Frost, Jeff	JCCC
Gorton, Donna	Butler CC
Gouvion, Ralph	Labette CC
Howe, Brian	Barton County CC
Johnson, Jean	Baker University
Joseph, Doug	Allen Community College
Kambhampati, Gayathri	Cloud County CC
LaLonde, Donna	Washburn University
Maginnis, John	Kansas State University
Mandal, Satya	University of Kansas
Nochols, Greg	Cowley College
Regehr, Walt	Allen Community College
Riazi-Kermani, Mohammad	Fort Hays State University
Smrha, Judy	Baker University
Stanley, Nathan	Neosho County CC
Tracy, Carol	Highland Community College
VanLuyck, DeeAnn	Fort Scott CC
Walcher, Paul	Wichita Area Technical College
Warkentin, Timothy	Cloud County CC
Whisler, Mark	Cloud County CC
Williams, Eloise	Flint Hills Tech at Emporia
Yanik, Joe	Emporia State University

Meeting notes:

- a. Report and action on previous meeting, if any  
None
- b. Course/core outcomes discussion  
None
- c. Items discussed but no decision or action taken  
Three issues were discussed: placement issues, assessment issues, and the need for an alternative course to College Algebra for liberal arts/social science majors. No actions were taken on these matters, other than the decision to continue examining and discussing these matters.

- d. Discussion regarding future need for meetings  
The group will meet again next year.

## Philosophy Minutes

**Date and place of meeting:** September 24, 2010

**Members present:**

Dennis Arjo (JCCC)  
Kevin Blackwell (Neosho County Community College)  
Tamela Ice (Kansas City Kansas Community College)  
Scott Jenkins (University of Kansas)  
Amy Lara (Kansas State University)  
Eunice D. Myers (Wichita State University)  
Eugene Rice (Fort Hays State University)  
Harold J. Rood (Washburn University)  
Mark C. Simpson (Labette Community College)  
Regina M. Turner (Butler County Community College)

**Facilitator:**

**Meeting notes:** Please report the key points of the discussion.

- a. *Report and Action on minutes of previous meeting(if any)*
- b. *Course/Core Outcomes Discussion*  
Our discussion focused on formulating core outcomes for an introductory Ethics course. We agreed on four with some agreement on detail.
- c. *Items discussed but undecided*  
We did not end with a finished product and there remains some disagreement on some points of content.
- d. *Decision regarding future need for meetings*  
We will meet again to consider possible revisions and additions to the document we produced

**List of group members and their emails**

Sarah Harris	<a href="mailto:sarah@labette.edu">sarah@labette.edu</a>	Labette CC

### **Meeting Notes:**

#### **a. Report any action on previous meeting if any**

No action pending from last year's meeting.

#### **b. Course /core outcomes discussion**

The focus of the group discussion focused on assessment of student learning:

1. What standards have programs developed?
2. How do the core outcomes in introductory and developmental psychology courses align with the psychology program standards at our respective institutions?
3. What measures are used to assess psychology standards at our respective institutions?
4. What feedback are colleges receiving about what they do for assessment?
5. What are the problems programs are experiencing or have had with their assessment plans, data analysis, creating a culture of assessment, reflecting on the data, and continuous improvement?

Participants reported that a number of assessment strategies were being used at their respective institutions; however, certain commonalities emerged as well as differences in approach. Some of the most common methods involved the use of common Rubrics for all on-campus course, pre-post tests, and individual student portfolios.

A few selected examples of approaches used at Kansas institutions:

At Neosho County Community College, instructors must post assessment levels on the course syllabus and pick which of the course's outcomes meet college goals. The percent of students achieving minimum level for various outcomes is reported.

Fort Scott uses a common Rubric for all courses, which helps instructors find out how well students are doing in particular competencies.

At Johnson County Community College, school-wide assessment is being developed that will be adapted to various programs. The school-wide assessment uses a common Rubric that is adapted to individual programs/courses. JCCC has rejected the use of individual grade distributions because of some of the problems inherent in that approach, such as difficulty of course content. The focus of assessment at the institutional level is on assessments performed at student exit; however, a universal final was tried but rejected.

One concern was raised that professors might be held responsible for assessments of students who are not responsible and do not complete assigned work.

Discussion was given to how student learning of the core outcomes developed at previous meetings (for General Psychology, Early Childhood Growth and Development, and Human Lifespan and Development) could be assessed if that might be required in the future, given that the various institutions represented at the table have different institutional goals and that their institutional assessments are linked strongly to these goals. The participants agreed this should be topic of future discussion and resolved that Rubrics used at the participating institutions for the three courses be brought to the next meeting for examination.

### **c. Items discussed but no decision or action taken**

Ruth Ann Atchley of the University of Kansas brought up the issue regarding PSYC 102, an online course required for KU majors in psychology. She suggested that students be advised to take the course **before** entering the KU psychology major.

An inquiry was made by the facilitator as to whether the panel would like to revisit the core outcomes with regard to alignment with American Psychological Association (APA) goals. The consensus was that no action needed to be taken on this issue.

### **d. Discussion regarding future need for meetings**

The topics identified for discussion at the next meeting include:

Examination of Rubrics used for assessment of student outcomes in General Psychology, Early Childhood Growth and Development, and Human Lifespan and Development.

Discussion of whether common Rubrics for the three courses could be developed.

Participants from four-year institutions should report on transfer problems.

Participants should attempt to identify any other courses for which core outcomes should be developed. Discuss resources for advisors.

## **Sociology Minutes**

**Discipline:** Sociology

**Date:** 9/24/10

**Facilitator:** Stu Shafer, JCCC

**Members present:**

Britton, Dana	Kansas State University
Eldridge, Mark	Neosho County CC
Hamedi, Jalal	Neosho County CC
Harris, Mark	Independence CC
Hart, Gerald	Fort Scott CC
Huffaker, Brad	Labette CC
Jackson, Nita	Butler CC
Johnson, Edmond	Barton County CC
Matson, Ron	Wichita State University
Park, Sangyoub	Washburn University
Ryan, Michael	Dodge City CC
Shafer, Stuart	JCCC
Sprague, Joey	University of Kansas
Vaz, Pelgy	Fort Hays State University
Wiggins, Cleon	Kansas City Kansas CC
Zirkle, Brian	JCCC

Meeting notes:

- a. Shafer reported that at the last meeting members discussed the possibility of including a course on social inequalities and diversity in the set of core courses for Sociology. That discussion included consideration of how such a course would fit as a transfer to the various universities in the Regents system. Since many of them have Inequalities as an upper-level course, transfer of such a course from community colleges is complicated. Nevertheless, members at that meeting felt it would be worth continuing the discussion in 2010. As JCCC faculty were in the process of conceptualizing a diversity course, they were asked to bring their work-in-progress as a starting point for discussion.
- b. Brian Zirkle, JCCC, presented an outline of a course being developed at JCCC as part of a sequence leading to an “emphasis” in diversity. The draft of that course takes a conceptual and dialectical approach to issues around diversity in American society. While members at this meeting found the draft course outline to be interesting and promising, they were concerned that it might not represent all the goals and objectives a course on social inequalities would need to include. They were also concerned that it might not be basic and practical enough to meet the needs of students at the various institutions represented. The group then turned to a discussion of what such a course might entail, following Joey Sprague’s (KU) suggestion that we start by outlining the major student outcomes a basic level course should produce. The first draft of an outline appears at the end of these minutes.
- c. Although a complete outline of course competencies and outcomes could not be finished at this meeting, the group decided to continue working on the details through a web-based collaborative process. Joey Sprague and Dana Britton (K-State) agreed to explore a couple of options for document sharing and collaborative editing. Once we have settled on a tool,

members agreed to upload syllabi of existing courses from which we can draw competencies and outcomes that would fit within the general framework built during our discussion this year. The goal will be to produce an outline of a course titled Diversity and Inequality in the United States, which could then be adapted by those schools who do not already have such a course or aligned with courses that are already in the catalogs of those who do.

- d. The goal of the group is to complete our work through this collaborative method over the next few months. If we are successful in this approach, the consensus was that we would not need to meet next year.

#### Diversity and Inequality in the United States

- I. Describe the dimensions of diversity and inequality, including race, class, and gender, etc.
  - A. Origins in History
  - B. Stratification
  - C. Distribution
  - D. Identity construction
- II. Understand the structural basis of inequality.
  - A. Theoretical perspectives
  - B. Current issues
- III. Be able to critically assess how diversity occurs and how inequality exists in major social institutions.
  - A. Political
  - B. Economic
  - C. Cultural
- IV. Understand how diversity occurs in social interaction
  - A. Acceptance and tolerance
  - B. Integration and Segregation
  - C. Social movements and resistance

## **Speech Minutes**

**Date:** September 10, 2010 – the group met at the Kansas Speech Communication Association meeting

**Facilitator:**

**Recorder:**

**Members Present:**

Nathan Magee	FSCC
Charlie Griffin	KSU
Terri Piazza	ACCC
Gary Harmon	KWU
Barbara Marshall	KWU
Kenna Reeves	ESU
Tanya Dockers	BCC
Pat Noble	HS
Marcella Marez	FHSU
Maria Ruda	FHSU
Marg Yaroslaski	DCCC

### **Meeting Notes:**

The following is a report of the outcomes meeting held for the basic communication courses in Kansas. A list of attendees is attached.

1. The Chair notified the group that an email had been sent to all community colleges regarding this meeting. She asked if the group wanted to continue holding annual outcome meetings and if the group wanted to hold that meeting in conjunction with the KSCA conference
  - a. It was determined that the group felt an annual meeting was important as there were many emerging issues to be discussed in the next few years.
  - b. The group decided that KSCA was a natural place for the meeting to be held and that a request would be made to the conference organizers to offer two slots on the agenda as opposed to one
    - i. Feedback as to the day was sought and the group indicated that Saturdays might work well for many College members.
  - c. KSCA was encouraged to seek paper and panel presentations from College Faculty to broaden the current KSCA workshop offerings.
  
2. A copy of the current outcomes was distributed. Discussion was held about whether the current outcomes reflect the content of courses accurately and provide a successful guide for instructors to develop syllabi that will successfully transfer.
  - a. An issue was raised about the use of the terms outcomes and competencies
  - b. Concerns was raised that the current outcomes do not clearly mention presentations aids mediated with technology.
  - c. Concerns were raised that the current outcomes overemphasized interpersonal communication.
  - d. A decision was made to create a committee to review the current outcomes with the intent to present a proposed set of new outcomes for approval at the next annual meeting.

- i. This committee will use the current outcomes as the beginning document and edit it for language and content changes based on current trends and reality.
  3. It was determined that while the redrafting of competencies would be approved next year, the group wanted to put forth a statement in its report of some critical issues.
    - a. Public speaking is a critical skill to employers that should be considered a foundational component of all educational programs. Successful communication is necessary to success in all fields and Public Speaking courses are designed to teach students basic communication theory, strengthen their critical thinking and improve their sense of their own ideas. Those broadly applicable skills should be at the core of any degree.
    - b. Courses in public speaking must teach students how to communicate with civility and how to communicate in a way that respects the audience's diverse cultures. Civility and cultural sensitivity are foundational to successful communication.
    - c. Technology is changing and for students to be prepared for the real world, courses must integrate the use of presentational aids with the use of appropriate technology.
    - d. Public Speaking courses wishing to be transferred to 4 year college without challenge should include 4 major speeches:
      - i. Major is defined as:
        1. Research is required and cited within the speech
        2. A written component is included.
        3. A time limit is specified.
        4. Peer critique/evaluation is completed.
4. Marg Yaroslaski, DCCC, was elected as the Chair of the group. The next meeting will be held at the KSCA meeting the 2<sup>nd</sup> week of September. Location to be determined.
  - a. Issues mentioned for discussion at the 2011 meeting:
    - i. Audience size requirements for online and other courses
    - ii. Interpersonal communication courses
    - iii. Emerging technology and its impact on speakers
    - iv. Approval of the redrafted outcomes

## **Theatre Minutes**

**Discipline:** Theatre

**Date:** September 24, 2010

**Facilitator:** Charlene Widener

**Members Present:**

Dwight Tolar, KSU  
Sharon Sullivan, Washburn  
Jim Lane, JCCC  
Tony Piazza, Allen Community College  
Scott McLaughlin, Cowley County  
Erin Renard, Barton County CC  
Jannell Robinson, Fort Scott CC  
Jerry Ditter, Highland CC  
Charlene Widener, Hutchinson CC  
Charles Leader, Kansas City Kansas CC  
Jeanne Klein, University of Kansas

### **Report on Previous Action:**

We briefly touched on the 3 courses previously worked on, Theatre Appreciation, Acting I, and Stagecraft, and decided the outcomes needed no revision. We did mention the fact that the titling of the Theatre Appreciation course is still not uniform: many colleges still prefer to use Introduction to Theatre as the course title. The issue was not considered to be a problem since both course title names are accepted from transfer institutions.

### **Core Outcomes Discussion**

The outcomes for Acting II course would be:

1. Demonstrate continued development of the actor's instrument
2. Apply additional acting theories, approaches and styles
3. Evaluate self and others' performances using oral and/or written critiques
4. Analyze and perform a variety of texts

In the discussion we looked at both differences and similarities between the Acting I and Acting II courses and tried to use the previously agreed upon outcomes from the Acting I course as a starting point. After much discussion, it was determined that Acting II outcomes should reflect the fact that students work with more complex and varied material and that there is more emphasis on performance evaluation for self as well as others. Also discussed was the obligation of Acting II students to be responsive to the community at large but we ultimately decided that this would be more of a competency of outcome 2 than an outcome in itself.

### **Discussion regarding future need for meetings**

It was determined that we need to meet next year to discuss the scope and range of the theatre practicum courses. There appears to be inconsistencies in both the content of the course and the amount of credit hours these types of courses are awarded. Also, there may be transferability issues and other questions that need to be clarified. Jeanne Klein has agreed to be facilitator for that session.
